

State-of-the-Art Musculoskeletal Care, Close to Home at Englewood Health

*A letter from Marc Arginteanu, MD,
and Asit K. Shah, MD, PhD*

Marc Arginteanu, MD
Chief of Neurosurgery

Englewood Health continues to assemble an impressive team of orthopedists and spinal specialists that rivals any in the entire tristate area. This group of physicians, aided by dedicated nursing staff and other medical professionals, works together to provide the highest level of care that, conveniently, is available right in your patients' neighborhood.

The core innovation is communication. Teamwork is the guiding principle at Englewood Health. Physicians working in orthopedics and neurosurgery actively collaborate and welcome nursing suggestions for improving patient care. Clinical expertise is abundant here, and teamwork compounds its power to create successful outcomes.

At Englewood Health, the most advanced diagnostic and therapeutic medical technology is available within our state-of-the-art facilities, all of which are designed to improve the patient experience, from admission to discharge. And perioperative care often goes beyond the date of discharge as the clinical team follows the trajectory of a patient's recovery at home.

Englewood Health offers the latest therapeutic orthopedic and spinal techniques. In addition, many of the physicians here are engaged in research to help formulate more advanced approaches for the benefit of future patients. Innovating the future of medicine is a core competency here at Englewood Health.

The advent of the COVID-19 pandemic put many elective surgeries on hold, but those procedures are once again taking place within Englewood Health. The highest levels of infection control are available, and, as noted in the sidebar on page 3, a stringent protocol is in place for all patients attending appointments on campus. The pandemic is no longer a reason for you or your patients to put off an important elective procedure.

Englewood Health orthopedists and spinal specialists work closely with all referring physicians to ensure continuity and excellence of care, and we invite you to collaborate with us should the need arise. ●

Asit K. Shah, MD, PhD
Chief of Orthopedic Surgery
